Diesel Engine

- Model:QSZ13-G10
- Structure: Using forged steel camshaft and crankshaft, high-strength cylinder design, many parts are cast on the cylinder, high rigidity, strong high pressure resistance, and longer service life;
- Excellent reliability: It is designed using the world's leading engineering technology and analysis tools and combined with the usage conditions of Chinese users. With the support of powerful sensors and electronic control systems, the engine has stronger high-altitude operating performance, low-temperature operation and large-load sustainability. Operating capability, the engine can operate freely at temperatures ranging from minus 40 to 60degrees Celsius and at an altitude of 5,200 meters.
- Fuel system: Using Cummins XPI ultra-high pressure common rail fuelinjection system and CTT high-flow turbocharger, combined with

- Cummins'advanced power cylinder design and electronic control system, it greatly reduces fuel consumption and ensures the engine's performance in different working conditions and applications. Excellent fuel economy;
- Lower emissions: Using an in-machine purification solution, it can meet the needs of hospitals, schools and other places that have stricter emission requirements;
