## Diesel Engine

- Model: YC6A230-D30
- Structure: High-strength cylinder block, reinforced crankshaft, and alloy steel connecting rods make the engine more durable and have a lighter and more compact structure among similar products;
- Adopting advanced and mature BOSCH electronically controlled common rail + efficient supercharging and intercooling technology to accurately control the injection. The amount of oil and air intake are sufficient to ensure that the diesel engine has sufficient combustion under different load conditions and improves fuel consumption. Low, less emissions;
- Using a full-flow oil cooler, the heat dissipation efficiency is increased by 30%, effectively reducing the temperature of the oil, allowing the oil to lubricate parts at a reasonable temperature and reducing friction losses;
- The piston is cooled by an internal cooling oil channel, which effectively reduces the piston temperature and has a long service life;
- The YC6A series engine is a mature product with excellent performance, high reliability, and has been tested by the market for a long time, with more than one million units put on the market. The model developed according to the characteristics of the generator set has the advantages of high cost performance, easy use and maintenance, and superior NVH performance.
