Diesel Engine

- Model: **M15-G3**
- The cylinder block and cylinder head adopt high-strength integrated design, which reduces the failure rate, is durable and has an excellent reputation; the integral all-steel piston design, the cylinder block and crankshaft made of high-strength materials, and the rigorous component testing and verification make the engine stronger; block integration, compact structure, low failure rate, low vibration, and low noise.
- Fuel system: The new Cummins high-pressure common rail fuel system is used, with ultra-high fuel injection pressure, which can accurately control the injection time and amount, and the thermal efficiency can reach 48%. The three-stage fuel filter ensures a balanced particle dispersion level, protects the main components of the fuel system, and maximizes the engine life.
- Easy maintenance: INSITE?, an engine monitoring and diagnostic software based on Windows operating system, provides users with a friendly interface and great freedom, and supports rapid diagnosis of engine faults. Overall modular design, block integration, compact structure, detachable parts, high reusability. More than 80% of common parts reduce user operation and maintenance costs. The industry's top NanoNet nano fuel filter and oil filter; wide adaptability of engine oil (CH4) and fuel, meeting the 500-hour maintenance cycle.
- The engine may be operated at:
1500 RPM up to 3000 ft. (1000 m) and 104 ° F (40 °C) without power deration.
For sustained operation above these conditions, derate by 8.6% per 1,000 ft.(305 m), and N/A% per 18 °F(N/A%% per 10 °C).
